

## **Beautify Blight**

### ***LOVE IS . . . . . CULTIVATING A COMMUNITY GARDEN***

Our 2009 - 2011 President Renee Blaschke's "New Project" is an endeavor to unite communities as team members in developing community gardens nationwide.

Through the joint efforts of a garden club, community group such as Chambers of Commerce, Parks & Recreation, government agencies or established volunteer groups and an organized youth group working together to find an unsightly area that can be made available to cultivating and planting a community vegetable garden.

The dual purpose is to make garden clubs a viable part in uniting all the participants in the need for community involvement in each other's lives as a service to those less fortunate by sharing the produce once realized by this project.

National Garden Clubs play a vital part in all our communities and it is important for us to be able to grow through our dedicated and visual commitment of service to our individual towns, cities, states and regions as a National organization.

If you have any questions, please contact this chairman, or your Regional or State Chairman.
